by a change of Residence from city to country. It is sometimes cured by a fever. Of this I knew an instance in a Lady in this City in whom it had continued 15 years. Also watershed to 100 - Dr Hudson.

The Ringworm - is produced by an egg deposited on the skin by an insect. It is often taken in newspapers. Whole regiments have thus been affected by its powers - hence we find it occupies successively different parts of the body. It is a distubing disease in the Eastern Countries. Volney says it is general in Egypt. Wherever it leaves a scar in the face. Its Remedium are. Ink & gunpowder, & diluted Drt. —

Leprosy - Is an exanthematous disease. It prevails formerly in countries now subject to -

= bilious fevers. It is sometimes cholera,
in common th fevers. Its remedies are
depurative, - alterative, & tonic, according to its various
actions. Such as promote
continual action as Aconite. Brought about
by the former 1811 & syphilis cured by the latter
in 1810 after 10 years continuance.

great care should be taken to examine
whether the patient has been relieved by it from
any internal disease as Hippocrate's - asthma -
Epilepsy or Vertigo - all of which have yielded to it,
in which cases it should not suddenly be used.

+ on white precipitate;; bogs and sp - or
if an ointment be objected to - Consist: but Zi
water &c - This should be applied to the affected
parts.

The Itch

This is a mild disease in our country
compared with other ^{the north} parts of Europe.
It is still more mild in the West Indies,
where it seldom appears ^{up} fingers,
but on the posterior only, & only among
the negroes. Its Epidemic in Armisado, pits.

✓ Its Remedies - are Sulphur
applied to the parts affected - dry - in
a shirt - or mixed with hogs lardion
applied to the feet.
Where Sulphur is objected to, Gal
Ointment may be used. To render the
cure of this, & other cutaneous diseases
complete - the Remedies shd be preserved
in after the disease disappears.

The Sonia Capitis or scald
head - is a disturbing disease. It is

and first washing the head with soap
& water, and applying over it cataplasms
of powdered charcoal. Much recommended
by Dr. Thoman. I have used it in two
cases with success. In one of them it
cured in a few days. Geo. Linn.

confined chiefly to children. Its remedies are general & local - the first are purges & low diet - the second are cutting of the hair, & if when practicable, shaving the head - tar ointment - or Ung Citrinum. It is often created ^{by} ~~by~~ lice, and hence it occurs chiefly in children whose heads are seldom combed, or washed. That lice will produce this disease, we learn from a fact related by Riverius, that he once cured a scrophulous tumor in the neck by putting some lice into his patients ^{heads}, they created a tinea capitis.

Morbus pedicularius or Lice.

They occupy not only the head, but a distinct species of them which will not live in the head, occupy the regions, the arm pits, and even the hair which covers the breast. It was a common disease in the 14th & 15th Centuries.

- It constituted one of the plagues of Egypt.
- It is as much the effect of a want of personal cleanliness, as much as yellow fever is the effect of a want of cleanliness in our cities and upon our farms. Its remedies are a strong decoction of Tobacco - an infusion of Lark Spur in Rum, and a solution of corrosive sublimate.

applied to the skin.

Ulcers belonging to the diseases of the skin. I have nothing to add to what I have said of them in the 2^d vol. of my Inquiries - but that I have since been successful in my treatment of them in proportion as I have considered them as connected with a weak or morbid diathesis of the whole system. ✓

Burns - are to be treated as local inflammations on the skin from other causes by us - prunes allow chit, when they bring the whole system into dyspepsia, the parts affected are to washed with cold water - lead water - and or draped with the lenient poultices & ointments - The King's Stream is one of the best. I know Dr. Kentish has lately recovered his perspective ^{Dr. Physick also} Dr. one speaks in high terms of it because it ~~is every answer~~, by deadening sensation & morbid actions - But it is preferable to large burns. Cold applic^{ns} are best in all.

system of phthisis. Inject them all is causes of
~~✓ as causes of disease.~~ even where they
exist they do not stimulate the heart &
blood vessels. This is the case with the serum
of the blood in the Scurvy. The supposed viscous
of the blood has been found to be owing
to the ~~gradual~~ ^{slow} coagulation of the blood
which permits the red particles to fall
completely to the bottom of the vessel in
which blood is drawn. Putrefaction can
have no place in the blood in the blood vessels.
This has been ably proved by Dr Lybert in
his inaugural dissertation.

we come next to certain local
diseases, & disorders which now follow them.

1. of the Blood -

It was supposed formerly to be the seat of all
~~diseases. Different makes it the home we used to~~
~~diseases of course. I repeat all the morbid~~
~~much of the viscosity in the~~
~~it curiosities of Dr. Boerhaave, & Jascike~~
all its different appearances as to consistency
to different degrees of morbid action of the
blood vessels upon it. Its different colors
are owing to different proportions of oxy-
-gene, and bile being mixed with it.

These colors are red - yellow - green, and
black. — Its slight deviations from
natural consistency, & color, are
all to be removed by altering the
state of the solids by tonics, or

v deficient in its proportions of red
particles to the colourable lymph and
serum. When it is excessive depletion by
fasting will be proper - when from dysle-
ction nourishing aliment will be proper.

dissolving too remedios. & It is sometimes

2 The Secreted fluids are liable to

a deficiency or excess in quantity.

2 to excess in fluidity, or solidity.

3 to a morbid aërimony. The Remedies
for ~~as~~ these disorders consist ^{of} such as
alter the state of the Solids, and blunt
aërimony. The latter I said formerly
are chiefly indicated in the prisons
viz. They are Diluting & Demulcent
drinks, both of which act upon Bill
and mucous. —

of the Skin & Hair

I have in another place endeavoured to account for the color of the negroes by supposing it to depend upon a leprosy of a peculiar kind, formed originally in Africa, & propagated from generation to generation, ~~and~~ and thus spread over extensive countries. The Hair is subject to falling out - this is prevented by washing the head with Spirits, & by cutting off, and shaving the hair two or three times. 2 To a cessation of its growth. In this case - the ends split. It is cured by cutting those ends off.

V. colors as far as beauty depends
the form & colors
upon colors, temperance & exercise
are calculated to impart it.

For the features of the face.

Deformity is the effect of disorder. It is something portion of bone - or flesh ~~in~~ out of place, or excessive or deficient in quantity. - when this deformity is innate, or of long continuance it is incurable. There are certain physical agents which are calculated to create & improve order in the features of the face. The principal of them are, temperance - exercise ~~the government of cheerfulness, &c~~, a life regulated by reason & Religion. & The ingebrious. ~~extremes~~ of the Savage, & the big, and dangling lips of the negro are both the effects of the

glossy distemp which belongs to their
modes of life. — cheerfulness of course
is calculated to prevent each of them,
above all, passions & conduct regulated
by reason & religion tend to impart
stability & dignity to the features and
countenance — ~~where we observe~~
~~either stability or dignity or w~~

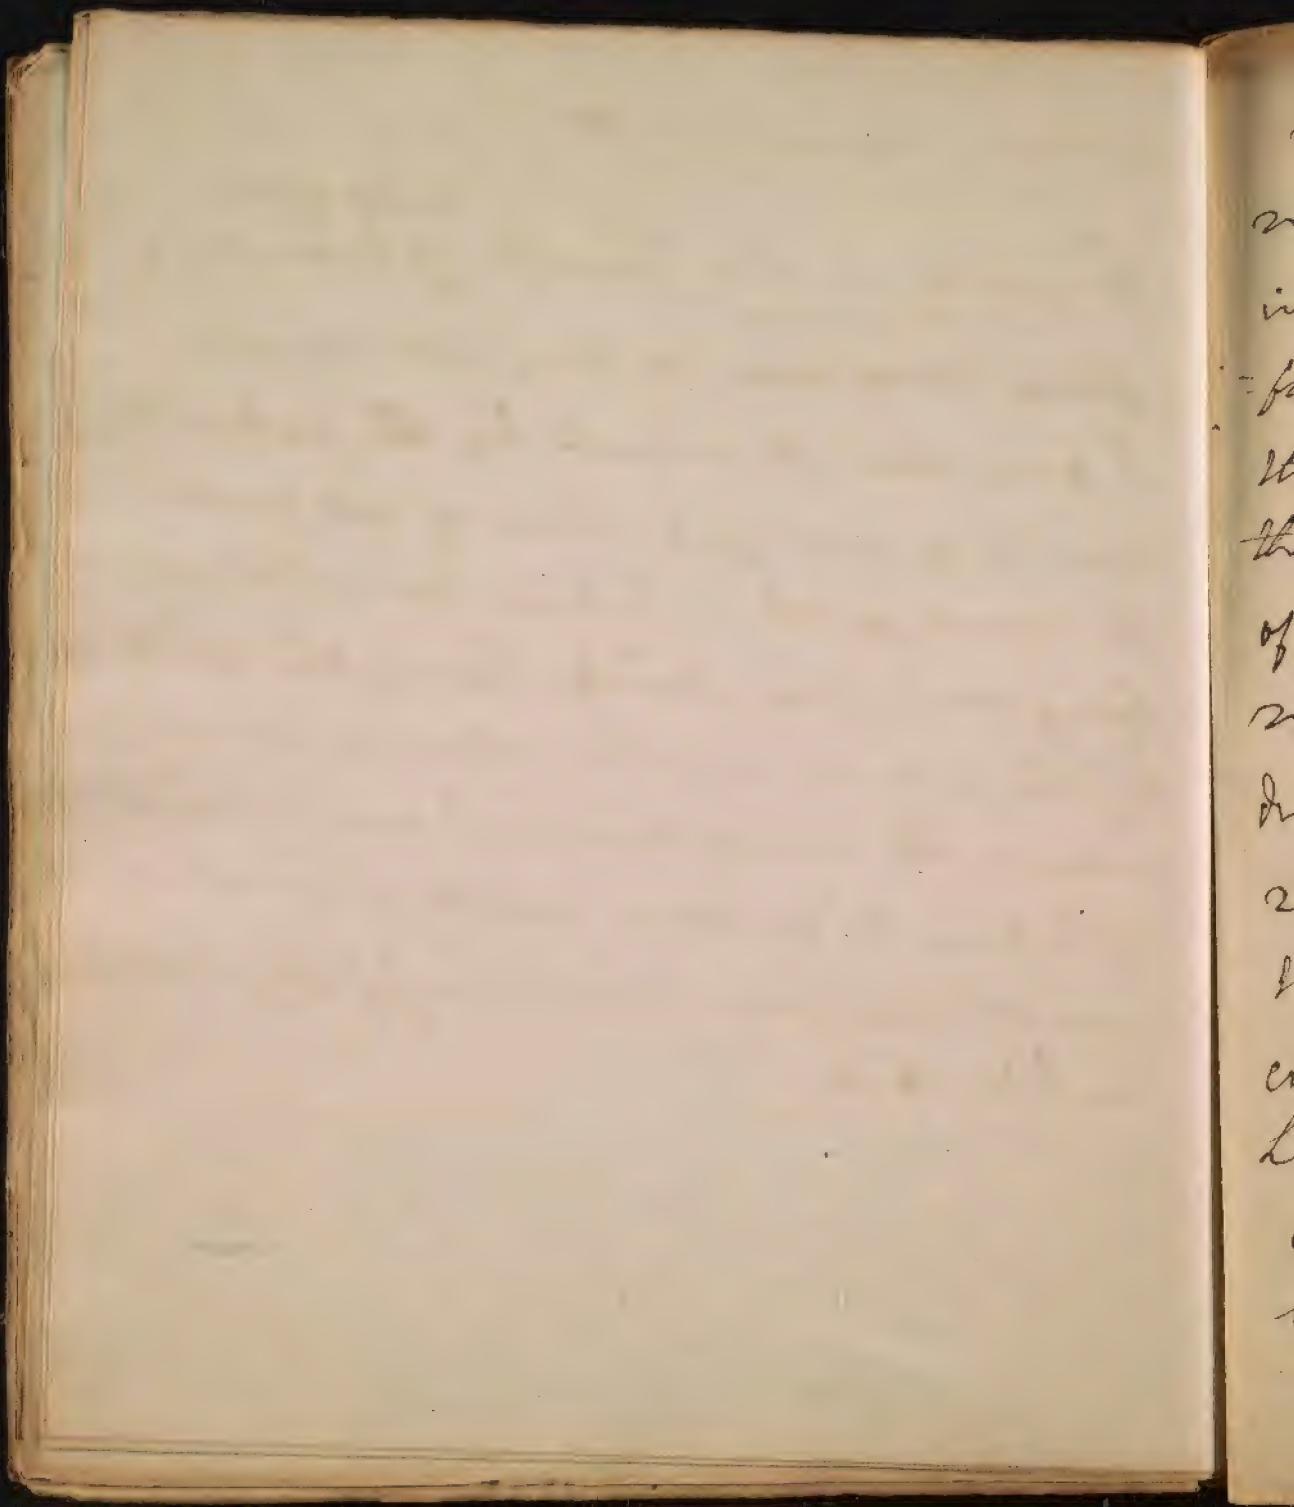

Disorders in the cellular membrane.

These arise from water - halitus & air.
we have treated of the 1^o under dropsy - the
2^o occurs in hysteria, & in cases of great debility, as,
its remedy is pressure or friction, with internal
tonics. Air occurs from wounds in the pleura
by the ribs, but I suspect it often takes place
in local & temporary swellings. It is cured like
halitus by pressure & frictions.

Hymenorrhœa

Is seated in the bowels & abdomen,
chiefly the former.

~~This~~ ^{livity of the} It is a rare disease.
I once saw it induced by the patient's
drinking large Quantities of cold water.
It proved fatal - I believe from toxics
being used promiscuously. From the habits
of the patient, and the extreme pain of
which he complained, I am disposed
to believe ~~of~~ of other upsetting Remedies
would have been more successfully employed in
in his case.

Upon all the diseases of the skin that have been mentioned I shall ^{briefly} remark that they are ^{they are} obstinate in proportion as they are insulated, or confined exclusively to the skin. By washing the body ^{or low diet} rebels by us we often lessen or cure them. ~~by so too do th.~~ You have seen the effects of these remedies in the inflam'd diseases of negroes. They often produces a temporary diminution of the black color of their skins. 2 strong wormits ~~sours~~ ^{lemons} ~~lemons~~ often have the same effect. The leprosy it is said is cured in S. America by eating lizards. These lizards from the food they eat, are poisonous, and act violently upon the stomach and bowels.

3 Existing a constant habitual diarrhoea, Reollect the connection between the skin

& bowels. As it exists most in summer,
this Chronic Diarrhea promises most
relief in that season.

4 Diuretics. Recollect the sympathy between
the Skin & kidneys. As it exists most in
winter, it should this class of medicines ~~be~~
be given only in cold weather.

5 Medicines which act ~~upon~~ ^{upon} the skin. The nutriment
of the Stomach upon the Skin. These are
bedriffies, Assens - Baths - particularly the
Earth bath. This is much commended in the
hot countries of the East.

6 External Applications to the Skin to
reduce, or ^{cautive} create natural action in the
capillary vessels. —
